

# MAGNESIUM LIMESTONE GORGE ITINERARY

---

Creswell Crags forms part of a geological feature which can be seen at various points along its spine.

In this region we share the geological feature with Pleasley Vale where the River Meden provided a water power source for the mill.

Further north the feature returns to punctuate the surface and provide a stunning backdrop to Roche Abbey. This beautiful ruin is managed by English Heritage.

Both sites offer complimentary experiences to the Ice Age caves at Creswell.
